

ON-LINE MANAGEMENT SYSTEM

Hot tubs chemical daily checks, cleaning and water replacements all need to be recorded as this provides a necessary audit trail. Our electronic logbook is used in conjunction with an app that can be downloaded onto your smart phone or iPad, eliminating the need for any more paper work.

POOL MAINTENANCE

Solway Water Management can offer

- Sand filter replacements;
- Balance tank cleaning;
- Full chemical analysis;
- Calibration of dosing systems;
- Cleaning of day tanks;
- Winterising and summerising of pools;
- Monthly bacterial sampling.

WATER TANK DEEP CLEANING

Sludge, sediment and bio-films (slime) accumulate within water tanks and pipe work and provide ideal nutrients sources for bacteria, therefore it is important that they are cleaned and disinfected regularly.

Water^{SOLWAY} MANAGEMENT

Based in Dumfries & Galloway and operating throughout the UK, Solway Water Management (SWM) provide Legionella risk assessments, training & water testing. We are able to provide independent impartial water safety advice covering the management, control and prevention of legionella and other waterborne pathogens.

SAFER WATER WITH SOLWAY

SAMPLING HOT TUBS, SWIMMING POOLS & SPAS

There are more and more businesses and individuals that are now providing hot tubs as part of their rental accommodation; this increase in popularity brings with it a heightened risk of hot tub rash & Legionnaires disease.

Hot tub operators & pool technicians need to be aware of the safe operations and legal requirements, as per the new hot tub guidance brought out in January 2017 (HSG 282) and existing swimming pool code of practise (PWTAG).

WHAT BACTERIA DO WE TEST FOR?

-  TVC
-  Ecoli
-  Coliforms
-  Pseudomonas aeruginosa
-  Legionella

WHY DO WE TEST FOR THIS?

Monthly sampling confirms that chemical checks are working effectively, thus protecting guests from waterborne & airborne diseases.

SAMPLING PRIVATE WATER SUPPLIES

A common misconception is private water supplies must be sampled by the local authorities. This is incorrect; they can only request that owners require a sample which may be completed by a competent third party tested to UKAS accredited specification. Solway Water Management provides this service.

LEGIONELLA RISK ASSESSMENTS

A common misconception is that Legionnaires disease is contracted from drinking contaminated water, this is incorrect. Legionnaires is an airborne disease and infection is caused by inhalation of contaminated water droplets that can enter your lungs where the bacteria will manifest. Due to its airborne capabilities the bacteria can inoculate people remote from premises.

As an employer, landlord, or a person in control of the premises, you are responsible for health and safety and need to ensure that a Legionella risk assessment is carried out by a competent person or company.

ONGOING MANAGEMENT AND CONSULTANCY

Solway Water Management can provide water safety and Legionella consultancy that facilitates business and individuals to meet current HSE standards as per:-

-  L8 ACOP
-  HSG 274 Pt 1, Pt 2, Pt 3
-  HSG 282

WATER SAFETY & LEGIONELLA AWARENESS TRAINING

We provide water safety and Legionella awareness training, this course is designed to ensure that hot tub staff have the knowledge needed to ensure that hot tubs and swim spas are safely maintained with suitable advice.
